Q13(Set A)/Q34(Set B)/Q23(Set C):
Given √136.18 = 0.0276 is mathematically incorrect. Likely intended √0.00076176 = 0.0276. Question contains an error.

Q20(Set A)/Q31(Set B)/Q12(Set C):
"By how much does 6 7/8 exceed 6/78?" Computed literally, 6 7/8 – 6/78 ≈ 6.798, which doesn't match any option cleanly. However, if the second value was meant to be "1/8" (likely misread as "6/78" during OCR), then 6 7/8 – 1/8 = 6 3/4, which exactly matches option B. I've gone with B based on this likely correction — please confirm the original question text.

Q29(Set A)/Q22(Set B)/Q42(Set C):
(marked ?): "Simplify: 8 1/2 – [3 1/5 – 4 1/2 of 5 1/3 + { 11 – (3 – 1 1/4 – 5/8) }]". Working through step by step: (3 – 1 1/4 – 5/8) = 9/8; {11 – 9/8} = 79/8; 4 1/2 of 5 1/3 = 24; [3 1/5 – 24 + 79/8] = –437/40; final result = 8 1/2 – (–437/40) = 777/40 = 19 17/40. This doesn't match any of the given options (–3 11/20, –120/31, 120/31, 3 11/20), which are all much smaller in magnitude. This strongly suggests a typo in one or more of the numbers in the original expression. Please re-check this question against the source material — I did not want to guess at a "corrected" version and give a potentially wrong answer.

Q43(Set A)/Q21(Set B)/Q33(Set C):
"Simplify: 4 of [32 ÷ 8 { 25 – (19 + 64 ÷ 16 × 2) }]". Following standard BODMAS strictly: (19 + 64÷16×2) = 19+8 = 27; {25–27} = –2; 8×(–2) = –16; 32÷(–16) = –2; 4×(–2) = –8. This doesn't match any option (2, 4, 8, 12), all of which are positive. This is a well-known style of question from Indian competitive exam books, and such versions commonly key to B) 4 — but that requires a non-standard grouping of "64 ÷ 16 × 2". I've provisionally marked it, but please verify the original numbers/brackets before finalizing.
